

LEVEL-1 DFD: ONLINE QUIZ PLATFORM

The Level-1 Data Flow diagram (DFD) shows the internal data movement of the Online Quiz Platform and how data flows. The system has 5 main processes, User Authentication, Quiz Management, Quiz Attempt, Grading & Scoring, and Report Generation.

User Authentication verifies login credentials for Students, Teachers and Admins by verifying through the User Database. After authentication, Teacher creates and manage the quizzes through Quiz Management where the quia data and question are stored in Quiz Database.

Students engage in the Quiz attempt process for requesting quizzes, answering questions and submitting responses and get the quiz questions from Quiz Database. the submitted answers are forwarded to the Grading & Soring process where it uses answer key from Quiz Database to check student response, calculates and stores the results in Result Database.

Report Generation process gets stored result data and generates report and analytics for Students Teachers and Admins where students receive quiz results, teachers gets class performance reports and analytics and Admin gets the system-level reports and monitoring information.
