

Library Kiosk - Return Book Activity Diagram

Activity Diagram Description

Process flow starts with checking the validity of book ID from the library system. If the book is not valid, the process stops there with an error. Next, we have a critical decision point that

asks whether the book is overdue; if yes, then we calculate the fine for the book and come up with another decision point that demands payment of fines before proceeding further; otherwise, the process rejects the request. Once the book has been verified as either non-overdue or overdue with a paid fine, three parallel processes follow to complete the book return process.
