

CLASS DIAGRAM: ONLINE QUIZ PLATFORM

The class diagram below represents the architectural design of the Online Quiz Platform, showing the system's main classes, attributes and the relationships between them.

The main classes of the Online Quiz Platform are User, Student, Teacher, Quiz, Question, Answer and Result where User performs as the parent class for Student and Teacher through inheritance.

The relationships capture the key interactions where teachers create quizzes, quizzes contain questions, questions have answers and students take quizzes and get the result.

This diagram functioned as the base for the MySQL database schema, ensuring uniformity between the object-oriented design (OOD) and the relational database implementation.
