

Description

The normal flow of returning a book will be initiated whenever the book returned is valid but not overdue; the system scans the book, registers the book to the library inventory, sends an acknowledgment message, and moves the book to its respective shelf automatically. The alternate flow for the scenario where the returned book is overdue starts with scanning of the book, determining the fine through FineCalculator, confirming the fine payment from the student, paying the fine, updating the inventory, and finally confirming the returned book. When the returned book is invalid, the system rejects and ejects it immediately.
